Coast Road Capital Website Supporting Outline and Information

*Any images such as logos will appear within google drive, if more are needed just let me know and I can get more for any area

Website Styles in Similar Field

Omnitrax - https://omnitrax.com/services/

- I think this is the best rail oriented one out of all. Outlines all the basic info and processes (moreso than others) - but to the naked eye or prospective business owner it is very blunt and doesn't provide a ton of detail

Trinity Rail - https://www.trinityrail.com

- Does good at showcasing equipment

Herzog - https://www.herzog.com/

- Contains multiple divisions similar to CRC, however I think they do an awful job of showing them off. This would be a good industry comparison site of a successful business but not a great website.

Prologis - https://www.prologis.com/property-search

- Property search tool and overall website feel, information readiness, and layout is really nice. Similar in a way to what Claude designed but this shows a pure execution. The essential solutions tab is also very good.

Brand Colors and Fonts

- The coloring and font is loosely based off two namesake historic railroads, the Seaboard Coast Line RR and the Milwaukee Road (Chicago, St. Paul, Milwaukee, and Pacific).
- Attached at three logos (Will create a drive with files) along with two photos of the locomotives for both railroads
- Logo is loosely based off the MILW herald under the cab window of the orange locomotive

- Fonts are loosely based upon the *Seaboard Coast Line* "**speed lettering"** which is branding across the entire side of the locomotive "long hood
    - I was unable to find/source an exact font for the SCL speed lettering. But if you are able to find it, I would say implement it into the website. I had Claude attempt to recreate it and the skeleton shows that result. I'm not unhappy with it though
- I was able to find a font called **Seaboard Block** from RailFonts, which is based on original Seaboard Coast Line lettering diagrams. This appears to be one of the closest available options to the historic SCL lettering.
    - Link: https://www.railfonts.com/cgi-bin/font_shop/fontshop.cgi?ACTION=enter&thispage=page10.html
    - I haven't confirmed whether it is an exact match for the slanted "speed lettering" used on SCL locomotives, but I would like to explore using it for website headings and titles if it fits.
    - If the font isn't suitable, Barlow Condensed ExtraBold Italic or Roboto Condensed Black Italic could be alternatives. For regular website text and descriptions, I would prefer something cleaner and easier to read at, you can use your discretion
    - The lettering within the existing CRC logo should remain unchanged.

Black: #0A0A09

For the Railcar Leasing section, I would like the equipment catalog organized primarily by railcar type, with more specific sizes and configurations available within each category.

The seven main categories should be Boxcars, Covered Hoppers, Open-Top Hoppers, Gondolas, Centerbeam Flatcars, General-Purpose/Bulkhead Flatcars, and Tank Cars. We do not plan to feature intermodal equipment or autoracks initially.

Within each category, customers should be able to browse common lengths, cubic capacities, typical commodities, and loading/unloading configurations. I would like the structure to support more detailed manufacturer-specific railcar models and technical specification sheets in the future.

For now, the catalog should function as an equipment sourcing and leasing inquiry tool, rather than displaying unverified inventory as immediately available.

Under each equipment type, I think it would be best to do a broad outline of the car sizes and capacities, and some generic info on what industries they serve. Here are some examples:

1. Boxcars - 50-ft standard, 50-ft high-cube, 60-ft standard, 60-ft high-cube, insulated, refrigerated

2. Covered Hoppers - 3,230 cu ft pressure differential, 3,281 cu ft cement/mineral, 4,359 cu ft industrial, 4,650–4,750 cu ft, 5,161–5,400 cu ft grain, 5,660–5,850 cu ft pneumatic, 6,241–6,541 cu ft large-capacity

3. Open-Top Hoppers - 2,400 cu ft, 2,480 cu ft rapid discharge, 2,900 cu ft aggregate, 3,000–4,000 cu ft bulk

4. Gondolas - 42-ft coil car, 52-ft mill gondola, 65/66-ft mill gondola, high-sided gondola, rotary gondola

5. Centerbeam Flatcars - 65-ft, 73-ft, riser-deck, riserless-deck

6. General-Purpose & Bulkhead Flatcars - 50-ft bulkhead, 60-ft bulkhead, 62-ft bulkhead, 60-ft general-purpose, 89-ft specialty flatcar, heavy-duty flatcar

7. Tank Cars - 13,000–19,000 gallon, 20,000–25,000 gallon, 25,000–30,000+ gallon; insulated, non-insulated, pressure and non-pressure configurations
